                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. The gene encodes a G-protein coupled receptor, and is CC designated MTL-RI (also GPR38). Two spliced forms of GPR38 exist, CC MTL-RIA (see AAV54145) and MTL-RIB (see AAY54146). MTL-RIA is a CC functional seven transmembrane domain form, and MTL-RIB is a truncated five transmembrane domain. The MTL-RI proteins are used to identify CC agonists and antagonists which can be used for treating gastric motility CC disorders, functional defects, disorders secondary to neurological CC disorders e.g. scleroderma, paraneoplastic syndromes radiation induced CC dysmotility, diabetes, infections, stress related motility disorders, psychgenic disorders, gastroparesis, gastro-oesophageal reflux disease, CC psychgenic disorders, idiopathis pseudo obstruction, acute faecal constipation, chronic idiopathis pseudo obstruction, acute faecal constipation, conscuperative ileus, gallstones, infantile collic, irritable bowel syndrome, non-ulcer dyspepsion, non-cardiac chest pain and CC diarrhoea. They can also be used in the preparation for colonoscopy, cendoscopy and incharation in the preparation for colonoscopy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
The invention relates to a method of forming a reversible peptide receptor complex that involves providing an immobilized receptor, and contacting the receptor with a zsig33 peptide (comprising residues 24-37 of AAB62649), where the receptor binds to the zsig33 peptide. The method is useful for purifying cells, purifying a peptide, stimulating signal transduction in a cell expressing a receptor. It is also useful for modulating secretion of hormones, neural development and/or utilization, gastric contractility, nutrient uptake, secretion of digestive and pancreatic enzymes and hormones, secretion of insulin-like growth factor 1, secretion of non-zsig33 proteins. It is useful for modulating growth hormone secretion in a mammal having a disease associated with abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Forming reversible peptide receptor complex for purifying cell a peptides, stimulating signal transduction and modulating hormone secretion, involves contacting a receptor with zsig33 polypeptid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gastric contractility; nutrient uptake; digestive; pancreatic; human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a human motilin receptor polypeptide. The specification describes an unique sequence present in exon 1 of the dog motilin receptor, which is not present in human or Sphaeroides nephelus 7587 motilin receptor sequences. The unique nucleic acid sequence is useful for measuring the ability of a compound to affect motilin receptor activity. Motilin receptor polymucleotides and polypeptides are used to identify therapeutic compounds which are useful for treating gastrointestinal diseases and disorders such as gastric motility disorders, gastroparesis, irritable bowel syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel polypeptides related to dog and rabbit motilin receptor polypeptide, comprising unique regions from dog and motilin receptor amino acid sequence, useful for identifying compounds for treating diarrhoea in humans

GPR38V can be expressed by standard recombinant methodology. The polynucleotides are polypeptides are used in the treatment of bacterial, fungal, protozoal and viral infections, infections caused by HIV-1 or HIV-2, pain, cancers diabetes, obseity, anorexia, asthma, Parkinson's disease, acute heart failure, hypertension, urinary retentions, osteoporosis, allergies, ulcers, migraine, psychotic and neurological disorders, or dyskinesias. They are also useful for identifying agonists and antagonists that are potentially useful in therapy, as vaccines to induce immunological response in a mammal. The polypeptides may also be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human GPR38V polypeptide and polynucleotide, useful for treating e.g. bacterial, fungal, protozoal and viral infections, cancers or allergies, as vaccines, and for identifying agonists and antagonists potentially useful in therapy

The specification describes an unique sequence present in exon 1 of the dog motilin receptor, which is not present in human or Sphaeroides nephelus 7587 motilin receptor sequences. The unique nucleic acid sequence is useful for measuring the ability of a compound to affect motilin receptor activity. Motilin receptor polynucleotides and polypeptides are used to identify therapeutic compounds which are useful for treating gastrointestinal diseases and disorders such as gastric motility disorders, gastroparesis, irritable bowel syndrome,

                                             disorders e.g. scleroderma, paraneoplastic syndromes radiation induced dysmotility, diabetes, infections, stress-related motility disorders, psychgenic disorders, gastroparesis, gastro-oesophageal reflux disease, constipation, chronic idiopathis pseudo obstruction, acute faecal impaction, postoperative ileus, gallstones, infantile collic, irritable bowel syndrome, non-uncer dyspepsion, non-cardiac chest pain and diarrhoea. They can also be used in the preparation for colonoscopy,
                                                                                                                                                                        The present sequence represents splice variant MTL-R1B of the motilin receptor. The gene encodes a G-protein coupled receptor, and is designated MTL-R1 (also GPR38). Two spliced forms of GPR38 exist, MTL-R1A (see AAY54145) and MTL-R1B (see AAY54146). MTL-R1A is a functional seven transmembrane domain form, and MTL-R1B is a truncated five transmembrane domain. The MTL-R1D proteins are used to identify agonists and antagonists which can be used for treating gastric motility disorders, functional defects, disorders secondary to neurological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         zsig33; signal transduction; hormone; enzyme; neural development; gastric contractility; nutrient uptake; digestive; pancreatic; human; insulin-like growth factor-I; growth hormone; bone; gastrointestinal; glucose; osteopathic; anorectic; vulnerary; immunomodulator; GHS-R; G-protein coupled receptor; motilin receptor; GPR38; GPR-38B; isoform
The invention relates to a method of forming a reversible peptide-
receptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsig33 peptide (comprising residues 24-37
of AAB62649), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
transduction in a cell expressing a receptor. It is also useful for
modulating secretion of hormones, neural development and/or utilization,
gastric contractility, nutrient uptake, secretion of digestive and
pancreatic enzymes and hormones, secretion of insulin-like growth factor
-I, secretion of non-zsig33 proteins. It is useful for modulating growth
                                                                                                                                                                                                                                                                                                                                                                                                          Forming reversible peptide receptor complex for purifying cell and peptides, stimulating signal transduction and modulating hormone secretion, involves contacting a receptor with zsig33 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23-JUL-2001

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            remodeling, low osteoblast levels, cartilage repair and retardation, skeletal dysplasia, immune suppression, obesity, growth retardation, protein catabolic responses after surgery, cachexia, protein loss, dwarfism, wound healing and ovulation induction, treating a mammal having a metabolic disorder requiring neurological feedback, such as satisty regulation, glucose absorption and metabolism and neuropathy-associated gastrointestinal disorders, and stimulating glucose-induced insulin release in a mammal. The present sequence represents the short form of motilin receptor, GPR-38B (one of the two isoforms of GPR38 which result from alternative splicing). GPR38 has homology to the human G-protein coupled receptor, GHS-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hormone secretion in a mammal having a disease associated with abnormal levels of growth hormone, such as osteoporosis, bone repair, bone remodeling, low osteoblast levels, cartilage repair and remodeling,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a motilin receptor (clone 75E7) which is related to the human motilin receptor of the invetion. The specification describes a G-protein coupled receptor, designated MTL-R1 (also GPR38). Two spliced forms of GPR38 exist, MTL-R1A (see AAY54145) and MTL-R1B (see AAY54145) and MTL-R1B (see AAY54146).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  bowel syndrome, non-ulcer dyspepsion, non-cardiac chest pain and diarrhoea. They can also be used in the preparation for colonoscopy,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a bacterial motilin receptor polypeptide. The specification describes an unique sequence present in exon 1 of the dog motilin receptor, which is not present in human or Sphaeroides nephelus 75E7 motilin receptor sequences. The unique nucleic acid sequence is useful for measuring the ability of a compound to affect motilin receptor activity. Motilin receptor polynucleotides and polypeptides are used to identify therapeutic compounds which are useful for treating gastrointestinal diseases and disorders such as useful for treating gastrointestinal diseases and disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         10-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sphaeroides nephelus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-CC AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743 CC and AAA30775-A30779). The mutant proteins of the invention contain a cc mutation in a portion of the protein comprising intracellular loop 3 CC (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, CC (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, CC (IC3) and is preferably Lys, when the endogenous residue at this cc position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Proceeding and the proteins are also useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical agents. The mutant proteins are also useful in research cc intentings for elucidating the roles of the receptors in normal and cc diseased conditions. Antagonists for a particular GPCR are useful for treating diseases and disorders associated with that receptor. Because the novel mutant GPCRs are constitutively active, they can be used conditions. Sequences AAY90643- AAY90677 and AAY90687 the mutant CC thuman GPCRs of the invention.

                                                                                      The present sequence represents a canine growth hormone secretagogue receptor (GHSR). The GHSR cDNA sequence was isolated from a canine cDNA library constructed from spleen. The GHSR polynucleotide is a source of probes and primers, which can be used to isolate GHSR genes from other species. It is also used for recombinant expression of the polypeptide. The GHSR polypeptide is used in assays to identify agonists, antagonist and inhibitors. Such identified compounds can serve as leads for the development of veterinary pharmaceuticals that can be used to treat dogs having illnesses in which inappropriate activity of the canine GHSR proteins involved. The polypeptides may also be used to raise antibodies for diagnostic and the processing involved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        57
```

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAY90683-Y90687), and to DNA encoding them (AAA30709-A30743 and AAA30775-A30779). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (IC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous residue in IC3 at a position 16 amino

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc acids N-terminal of an endogenous proline in TM6 to form a sequence CC x-(AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg CC or Ala, and is preferably Lys. When the endogenous residue at this CC position is Lys, this residue is replaced by His, Arg or preferably Ala. CC The 15 amino acid stretch between the substituted amino acid and the Pro CC may be endogenous, non-endogenous, or a mixture of endogenous and CC mon-endogenous residues. The constitutively active GPCRs are useful for CC pharmaceutical agents. The mutant proteins are also useful in research CC pharmaceutical agents. The mutant proteins are also useful in research CC entings for elucidating the roles of the receptors in normal and CC diseased conditions. Antagonists for a particular GPCR are useful for C treating diseases and disorders associated with that receptor. Because CC the novel mutant GPCRs are constitutively active, they can be used CC directly for screening of compounds without the need for endogenous CC ligands. The present sequence represents a human wild-type GPCR referred CC to in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The patent discloses a method of identifying agonists and inverse or partial agonists to the endogenous, constitutively activated grotein-coupled orphan receptors (GPCRs), by contacting them with a GPCR fusion protein comprising a GPCR and a G protein. Determining expression of GPCRs in tissue samples can be used to identify related diseases. Inverse agonists to these receptors can be used as drugs for treating GPCR-related diseases. The present protein sequence is that of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 2; Page 123; 123pp; English.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The

Vector DNA was prepared from a derivative of pWD42 (gi|4732114)gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

           /note-Torgan: Stomach; Vector: pCNS; Site_1: EcoRI; Site_2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was adjusted to have about 60nt of the cDNA vector was selected manalized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The
